

I am very concerned about the use of BPL. From everything I have read, it will cause interference to the HF (VHF? UHF?) radio bands. I've been an amateur radio operator since 1959 and attribute my occupations (communications, electronics, television, systems analysis for NASA - 39 years) to my amateur radio training and experience.

I have invested thousands of hours in amateur radio and public service. To see my ability to enjoy my hobby and my ability to do public service work reduced to possibly nothing has me very concerned.

The value of the equipment I have invested in the hobby will be virtually worthless if accounts of BPL's interference levels are accurate.
